Participants 2021-11-11

John Wieczorek (Darwin Core Maintenance Group Convener; gtuco.btuco@gmail.com)

Diego Barroso (TORCH TCN Proj Mgr; BRIT, Fort Worth, TX, USA) dbarroso@brit.org

Sharon Grant (Field Museum of Natural History, USA) sgrant@fieldmuseum.org

Deborah Paul (Species File Group, Community Liaison, dlpaul@illinois.edu)

Steve Baskauf (DwC, AC Maintenance Group, Vanderbilt University Heard Libraries, steve.baskauf@vanderbilt.edu)

Shelley James (WA Herbarium, Oceania Rep, shelley.james@dbca.wa.gov.au)

Ben Norton (NCMNS) ben.norton@naturalsciences.org

William Ulate (Missouri Botanical Garden / WFO / CRBio.org, william_ulate_r@yahoo.com)

Takeru Nakazato (Database Center for Life Science, Japan; nakazato@dbcls.rois.ac.jp)

Greg Whitbread (taxamatics, taxamatics@gmail.com)

Stan Blum (TDWG), stanblum@gmail.com

Holly Little (Smithsonian NMNH, littleh@si.edu)

Darwin Core Introduction

Core Documents

- List of Terms - <https://dwc.tdwg.org/list/>
- Guides
 - Quick Reference Guide - <https://dwc.tdwg.org/terms/>
 - Text Guide (Darwin Core Archives) - <https://dwc.tdwg.org/text/>
 - RDF Guide - <https://dwc.tdwg.org/rdf/>
 - XML Guide - <https://dwc.tdwg.org/xml/>
- Controlled Vocabularies
 - EstablishmentMeans - <https://dwc.tdwg.org/em/>
 - DegreeOfEstablishment - <https://dwc.tdwg.org/doe/>
 - Pathway - <https://dwc.tdwg.org/pw/>
- Extensions
 - ChronometricAge Quick Reference Guide - <https://tdwg.github.io/chrono/terms/>
 - GBIF Extensions - <https://tools.gbif.org/dwca-validator/extensions.do>

Active Task Groups

- Humboldt Core (meeting 17 Nov) - <https://github.com/tdwg/hc>
- How did it die? (meeting 17 Nov) - <https://www.tdwg.org/community/osr/how-did-it-die/>
- Plant Phenology (meeting 3 Nov) - <https://www.tdwg.org/community/osr/phenology/>

Darwin Core Questions & Answers

- <https://github.com/tdwg/dwc-qa/blob/master/README.md>

Maintenance Group

- <https://www.tdwg.org/community/dwc/>

Maintenance Process

- Darwin Core: A (Public) Review
<https://github.com/tdwg/dwc-qa/wiki/Webinars#chapter18>

Open Issues

- <https://github.com/tdwg/dwc/issues>

Meeting Notes 2021-11-11

Questions 2021-11-11

Participants 2021-11-03

John Wieczorek (Darwin Core Maintenance Group Convener)
Steve Baskauf (Vanderbilt University Libraries, Dwc Maintenance Group)
Shelley James (WA Herbarium, Oceania Rep)
Edward Zbik (Australasian Mining History)
James Macklin (Agriculture and Agri-Food Canada, Ottawa, Co-convener of TAG)
Holly Little (Smithsonian NMNH)
Visotheary Ung (MNHN Paris, secretary)
Louise Keszler (MNHN, RECOLNAT- French National network for natural history collections)
Ben Norton (North Carolina Museum of Natural Sciences)
Patricia Mergen (Meise Botanic Garden, Zoom admin, backup)
David Fichtmueller (Botanic Garden and Botanical Museum Berlin, BGBM)
Sophie Pamerlon (GBIF France, MNHN/OFB, France)
Takeru Nakazato (Database Center for Life Science, Japan)
John Torgersen (Canadian Museum of Nature, Ottawa)
Anne-Sophie Archambeau (IRD/GBIF France)
Catalina Merino (MNHN, Chile)
Quentin Groom (Meise Botanic Garden, Belgium)
Erica Krimmel (iDigBio, Florida State University)

Meeting Notes 2021-11-03

See recording (explaining, what is behind each links here above in the agenda)

Issues discussion: What is a normative change and what is not ? Can have some subjectivity. Change wording, other than typos has to be reviewed. Information in the notes might change people's understanding even if the definition does not change. even if non-normative but may need a review and has an impact. be aware of this

Questions 2021-11-03

1. Steve Baskauf (clarification) : term name how is this different label. term name is used for the IRI so cannot be changed but labels can be changed.
2. Steve Baskauf (clarification) : One of the key is controlled value, is what you put in the spreadsheet not necessarily the Label;
3. Steve: (clarification): not a formal extension, but has a bag of terms.
4. Peter: What is the best way to link to GBIF extensions? rs.tdwg.org or tools.gbif.org/data-validator/extensions.do → Answer: Use the second one for convenience reasons, but good to use <https://rs.gbif.org> as well.
https://rs.gbif.org/extension/gbif/1.0/distribution_2020-07-15.xml (versioned) More difficult to drill down in GBIF 1.0, links that are used in the IPT by machines, more or less also human readable. ---> they are under testing/development, thus not in use in the IPT yet. No update when it will be completed, to ask GBIF when testing is done.
5. Peter (**suggestion**): would it make sense to move resourceRelationship and measurementOrFact to their own extension pages? (linked to quick reference Guide)
---> John → likes that suggestion, as would simplify the pages and make it clearer.
→ Peter can choose where it is maintained but on the website at the same page --->

Steve : technical issues, where the redirect go, and as they are in the DWC namespace, have to control how the redirect goes, this is why they are in the same page → John can we produce a new Namespace for them, but what would be the impact in the process behind the scenes ?

6. James Macklin : look at domain based interpretation in the past. So definition maybe domain based and have impact. Are domain based text necessary ? ---> difficult to prioritize as volunteer group, see shifts as standards get more and more under control and get more feedback and attention to look into such issues. It is now in a good situation where we can worry more on controlled vocabularies including context
7. Steve : Hae a simple bag of term, with meaning and definition as clear as possible, but can build layers on top of it. Vocabularies enhancements : types, repeated, restrictions, etc .. Same could be used build on top to add understanding in the context or in the domain. It is something that could be done, has been written but is not officially part of it , also no unofficial example so far.
8. Peter : translations of terms in other languages can also be considered it which is also needed but challenging for the maintenance group. Gets big and see that people do not get lost, would need more people to help maintain DWC → John agrees, lot of interest to see if the whole TDWG web site and content can be translated (including automatically), Using Crowd-in as an experiment for TDWG (currently used by GBIF). How is it possible to incorporate this in TDWG ? How feasible is it → Question to the TDWG exec, this is beyond DWC
9. James : If we translate normative descriptions/Description, do we need a note that EN version is the normative one, while other languages are not ? → it is already there to some extent.
10. John: should we include all issues regarding non-normative change in a semi-annual review? Steve: yes, because creating an update/version to DwC requires work, so makes sense to cover these. Holly: second that, including the non-trivial non-normative changes in a review does really help with awareness

Issues discussions open : <https://github.com/tdwg/dwc/issues>

Examples

Class location : list of issues about the Location Class so can address them together

17 non-normative issues : what has been changed

Normative : 16 open, need to be resolved as go the review. Here are also new terms suggestions

Process: where is it to get to the standard. ie ready for public comments

label : term change, or term addition. can also affects the documentation (ie RDF)

Issue : # 194: Term change relationshipOfResource → Comment was not addressed, while it got in DWC it was missed a non-normative change, add a paleontological example → new issue to solve. (from ekrimmel)

From James Macklin to Everyone: 02:10 PM

Could you just close it and reopen it with a rationale? → John has done this so far. → James why is this not enough ? → could be done this way ? ---> Rational to create a new issue to discuss, if reopen, would need to modify because missed it ?

Peter ---> would make sense to have a new issue, can create as reference in new issue and keep the link with original issue. → John if create terms changes or new terms, use the same template and produces a basic structure. so this would be a term change to add an example and can create a new issue based on the old one. It is just the small maintenance group and can be flexible, but if more people come in it is better to have an agreed common process. → if nobody opposes, it would be done as suggested to have a “new issue Term change template”

Milestone:

Need also a milestone (Post TDWG 2021 Public Review) due date by end 2021. term changes and open requests to list those.

If do semi-annual reviews, should we add non-normative changes so there is a check that they really are and not actually normative

Steve: There a lot of blurriness to do changes, probably convenient to group them. Avoid to have to do a lot of updates of individual small changes; It might be less work to do it all six months, unless it is urgent: → John ok : 17 things non-normative to change and so would be out of the way and go also in public review. so run the process twice anyhow, as need to go the scripts, but less work than a full public review.

Steve : Vocabulary maintenance gives flexibility, typos, punctuations does not need too much explanation but if changes of text needs to be advertised, outside the maintenance group even if non-normative. Can be explained in the guide, but would not be a new version. Difference between a version and a new release ... (then it also gets published and in Zenodo)

James: get them to users : DWC hours, news, without that GBIF needs to go to a process. Need to see with GBIF if it is fine to act as such.

Holly : Seconds to not complicate the process. But happened before that non-normative changes needed more explanations, also for other purposes.

James: Cross references issues : generated task groups to look into specific issues ? Do we need this more ? → John it is there ...

James: Have they a responsibility to give an answer → Maintenance members are in the task groups to channel this, although there is no strict deadline to answer or give feedback. There are 12 such open issues to be resolved in task groups. For now just links to Material Sample group, but could be expanded to more when relevant.

Peter to write a now issues : to separate guides pages, but still do it, while it is more complicated that first thought

Look on normative changes :

Change a name of a Class, just after it was created : Material citation only published literature or also grey literature (field notes). → Steve considers labels instead of changing terms. as changing terms has a large impact. Change the label, descriptions, but not the term for the iri.

Ben Norton: Understand the issue, change the term as it breaks things, has it the same impact if change labels → it is not normative. for non-english, want to see the translation of the label, not the term.

MaterialCitation to MaterialMention -->to go review as asked though

Validity to go to how did it die TG.

parentMeasurementID : need a process stage, add labels ; Does it have all necessary information in it to describe the issue ? Evidence for stability ? Material mention it seems ready for public comment → ok

Ben: What about a template for term change or label change, but it in bold which it is, what changes, can also be other or incompass better the definition, better explain the term itself is that sufficient for a justification ---> John good start

Steve : can also there say if want to change the definition

First comments can be updated, so people can understand and evolves as comments come in.

#360: created on June 16 after the review. Change term original Name usage → need more discussions. No demand justification. to check.

David : The issue is that Marcus thinks that definitions are contradicting. does this apply as evidence for demand ? Is there more need for evidence for demand ? See answers in other related issues. May need several second opinions → can be a public review. This should be the correct link to the UI: <https://github.com/tdwg/dwc/issues/templates/edit>

John may remove demand for justification, but still need a clear definition of what is asked., would need to be better defined, what changes are proposed actually ?

Steve : would be helpful if bold what has to change, small wording change ... so makes it easier for the maintenance group. → can be bold (**) or strikethrough (**to check which sign to use**) for removal of words → is for template change term, not for new terms. put explanation on the top of the template.

Decide on next milestones, are semi-annual reviews realistic ? Could do a round very soon (now)--> no objections ... 3 yes (thumbs up)

There will be a next session on the 11th for 1 h

from the chat :

IRI = Internationalized Resource Identifier (e.g. a URL)

From David Fichtmueller to Everyone: 01:15 PM

From the ABCD side, this is done partially, there is lot of room for improving the mappings.

From Peter Desmet to Everyone: 01:17 PM

dwciri:

dwc:

example of dwc:establishmentMeans: "native": <https://example.com/definitionForNative>

From Peter Desmet to Everyone: 01:28 PM

SKOS Simple Knowledge Organization System <https://www.w3.org/2004/02/skos/>

ITG12: Audubon Core Maintenance Group session will be Wed. Nov 10 at 21:00 UTC

Vocabulary enhancements:

<https://github.com/tdwg/vocab/blob/master/vms/maintenance-specification.md#4-vocabulary-enhancements>

From TDWG Executive to Everyone: 01:55 PM

+1 to James' question. We are considering similar domain guidelines in paleo.

From Steve Baskauf to Everyone: 02:03 PM

Vocabulary enhancements:

<https://github.com/tdwg/vocab/blob/master/vms/maintenance-specification.md#4-vocabulary-enhancements>
terms

From Peter Desmet to Everyone: 02:26 PM

I think the distinction between

Release notes are probably the best way to communicate changes one version to another

From TDWG Executive to Everyone: 02:26 PM

including the non-trivial non-normative changes in a review does really help with awareness

Peter Desmet à Tout le monde (14:26)

I think the distinction between normative vs non-normative changes are more important to the maintenance group/developers than to most data publishing users

Release notes are probably the best way to communicate changes one version to another

TDWG Executive (Holly Little) à Tout le monde (14:27)

including the non-trivial non-normative changes in a review does really help with awareness

From Quentin Groom to Everyone: 02:35 PM

I don't think there is any significant difference between these terms

From Steve Baskauf to Everyone: 02:56 PM

Can the proposal for changing the label of stateProvince be added to #395?
